

New sails speed up Bavaria!

These two boats are equipped with similar mainsails. One is white and the other one is coloured. Both sail fabrics are laminated Pentex fibres, but the white one has a thin polyester weave on each side to make the sail more resistant to wear.

It's a well-known fact that a standard undercut furling mainsail isn't the proper "motor" for the modern yacht.

In conclusion:

Using sails with efficient construction, intelligent design along with a light-weight, strong and durable material, your boat will go closer to wind and perform higher speeds!

The modern furling mainsail *Vertech Main* adds speed, pointing ability together with less heeling and gives the yacht a smarter look.

Retailer:

A performance test was run over three days in September 2005 with various conditions up to 17 m/s.
